Nonstandard SPV.#### Numbering and Description Policy: In Trns•port a nonstandard SPV.#### item number can be used more than once in a project if you have unique items with the same unit of measure. The correct SPV.#### item is selected based on the correct unit of measure needed. When using one or more of a nonstandard SPV.#### item number in an estimate a standard description of “**SPECIAL**” is assigned. A supplemental description must be used to further describe the item.

A supplemental description shall begin with a number (01.,02.,03.,04.,...). This will aid in organizing the special provisions in the proposal. The number should be 2 digits (01., 02., 03., etc.) unless there will be more than 100 items for a specific SPV. ### item number. If there will be more than 100 items, use 3 digits (001., 002., 003., etc.). Item numbers do not have to be in numerical order if additions or deletions are made.

The supplemental description needs to fit into the number of characters available in Trns•port and should be checked that words are not truncated at improper places on the printout. (NOTE: Estimator has more characters per line of description than PES and may cause words to truncate or word wrap and should be adjusted.) Abbreviations are to be avoided whenever possible. It is **VERY IMPORTANT** that whatever format is used for a supplemental description is maintained throughout the rest of the estimate, miscellaneous quantity tables, and special provisions, as not to cause bidders any confusion. Remember to generate line numbers prior to printing.

Examples:

As it should appear in supplemental description data field:

01. CONCRETE CURB AND GUTTER
 30-INCH TYPE A SPECIAL

As it appears on the estimate printout:

SPV.0090 SPECIAL 01. CONCRETE CURB AND GUTTER 100 LF \$12.000
